Europe Energy Saving Notice

Energy Saving Matters (EuP 2009/125/EC)

Saving electric energy is a key to help protecting the environment. Please turn off all electrical products when they are not in use. To avoid power consumption in idle mode, disconnect all electrical equipment from power when not in use. Thank you!

DOCUMENT VERSION

Due to additional product features and/or enhancements, an updated version of this document may be available online.

Please check www.adj.com for the latest revision/update of this manual before beginning installation and/or programming.

Date	Document Version	Software Version	DMX Channels	Notes
07/22/2021	1.0	V1.00	4 / 6 / 7 / 8 / 9A / 9B / 10 / 11 / 12 / 15 / 18 channels	Initial Release
11/05/2021	1.1	N/C	No Change	Updated Key Features, Safety Guidelines, Overview, Installation, In-Case Charging, System Menu, DMX Traits, Dimensional Drawing, Specifications; Removed DMX Setup.
01/20/2022	1.2	V1.02	No Change	Updated System Menu, Dimensional Drawings, and Specifications.
05/06/2022	1.3	N/C	No Change	Updated UC IR Remote.
05/12/2022	1.4	V1.03	No Change	Updated System Menu to add Saver 14 mode; updated Specifications.
08/17/2022	1.5	N/C	No Change	Updated Key Features, Installation.
10/25/2022	1.6	N/C	No Change	Updated Overview, Dimensional Drawings.
12/23/2022	1.7	V1.05	No Change	Replaced UC IR section with updated IR Remote Control section; updated System Menu; added IR Default RGBA Values and Editing RGBA IR Button Values
05/22/2023	1.8	V2.01	No Change	Updated Wireless Set Up, IR Remote Control, System Menu, Torque Settings, Specifications
07/24/2023	1.9	N/C	No Change	Updated Overview, Fuse Replacement, Specifications; added FCC Statement
11/15/2024	2.0	V2.02	No Change	Updated System Menu & DMX Traits.
11/14/2025	2.1	N/C	No Change	Updated General Info, Aria Setup and Guidelines, Specifications
07/22/2026	2.2	N/C	No Change	Update Specifications

INFORMATION

INTRODUCTION

Please read and understand the instructions in this manual carefully and thoroughly before attempting to operate this device. These instructions contain important safety and use information.

This product is intended for use by professionally trained personnel only, and is not suitable for private use.

Unpacking

Every device has been thoroughly tested and has been shipped in perfect operating condition. Carefully check the shipping carton for damage that may have occurred during shipping. If the carton is damaged, carefully inspect the device for damage, and be sure all accessories necessary to install and operate the device have arrived intact. In the event damage has been found or parts are missing, please contact our customer support team for further instructions. Please do not return this device to your dealer without first contacting customer support. Please do not discard the shipping carton in the trash. Please recycle whenever possible.

LIMITED WARRANTY & PRODUCT REGISTRATION

For up-to-date warranty information regarding your device, please visit ADJ's warranty information and registration pages online or scan the QR codes below.

It is strongly recommended to power the fixture down completely when not in use. Doing so will reduce wear on the fixture due to sustained or extended operational periods, thereby maximizing its operational lifespan.

KEY FEATURES

FIXTURE FEATURES

- IP65 Outdoor Rated
- 15 Degree Beam Angle
- 4-touch button OLED display on rear panel
- Built-in wireless DMX: Up to 2,500 feet (760M) when used with ADJ's wireless transceiver
- 64 built-in Color Macros
- Flicker Free Operation
- Electronic Dimming: 0 - 100% with 6 dim modes and 4 dim curves
- Rechargeable Lithium-Ion Battery
- Battery Charge Time: 7 Hours
- Battery Life: 40 hours (single color)
- Motion-Activated Alarm Feature
- Kensington Key Slot

CASE FEATURES

- Houses / Transports and Charges (6) MIRAGE Q6 IP™ fixtures
- Power Input: AC100VAC~240VAC, 50/60Hz
- Charge status indicator

IP65 RATED

The International Protection (IP) rating system is commonly expressed as “IP” (Ingress Protection) followed by two numbers (i.e. IP65), where the numbers define the degree of protection. The first digit (Foreign Bodies Protection) indicates the extent of protection against particles entering the fixture, and the second digit (Water Protection) indicates the extent of protection against water entering the fixture. An **IP65** rated lighting fixture is designed and tested to protect against the ingress of dust (6), and low-pressure water jets from any direction (5).

NOTE: THIS FIXTURE IS INTENDED FOR TEMPORARY OUTDOOR USE ONLY!

Maritime/Coastal Environment Installations: A coastal environment is seaside adjacent, and caustic to electronics through exposure to atomized salt-water and humidity, whereas maritime is anywhere within 5-miles of a coastal environment.

NOT suitable for maritime/coastal environment installations. Installing this fixture in a maritime/coastal environment may cause corrosion and/or excessive wear to the interior and/or exterior components of the fixture. Damages and/or performance issues resulting from installation in a maritime/coastal environment will void the manufactures warranty, and will NOT be subject to any warranty claims and/or repairs.

Maritime installations require additional preparation, and additional service intervals may be needed given the maritime use. In general, IP ratings presuppose freshwater conditions VS maritime conditions, which are typically more “caustic” to IP fixtures (both internally and externally). A duty-cycle may also be needed when units are not in use. During times of high humidity and colder temperatures, condensation may occur internally so the fixture may require a duty-cycle to bring it up to running temperature, allowing any accumulation of moisture to be expelled via the vent valve. Recommendations can change based on installation environmental circumstances. A waterproof dome or similar device is recommended for use in permanent outdoor installations. When using a dome, refer to manufacturer recommendations for duty-cycle.

NOTE: NOT ALL FEATURES LISTED ARE AVAILABLE ON ALL FIXTURES; THE FOLLOWING INSTRUCTIONS MAY NOT APPLY. CONTACT SUPPORT FOR ADDITIONAL DETAILS.

Exterior Maintenance: Inspect the exterior every 30-days. The unit must be powered off/disconnected. Inspect optics to determine if the lens is obstructed, then clean optics and chassis accordingly. Based on initial finding, schedule maintenance accordingly, keeping in mind that exterior maintenance will be required. Even if the luminaires are NOT in use, maintenance will still be needed given its location (exterior use). The use of a durable type of wax on the chassis is recommended since it will help prevent contaminant build up. Inspect both power and data lines for any signs of contaminants or corrosion. Periodically reapplying di-electric grease, especially in coastal environments. If any signs of corrosion/contaminants are present, clean thoroughly, and/or replace connectors, then reapply di-electric grease. Typically, this should be done annually, or any time an opportunity presents itself. As a preventive measure, annual replacement of both vent valves is recommended. The vent valve membrane can become contaminated and/or clogged causing improper venting of humidity within the luminaire. Inspect all mounting hardware as a precaution.

Interior Maintenance: Inspect the interior every 30-days. The unit must be powered off/disconnected.

- Inspect zoom/focus mechanism, clean optics, lubricate linear bearings (Krytox oil) as needed, inspect belts for wear
- Inspect all rotating effect wheels, manually rotate them, note any resistance
- Inspect all remaining rotating belts for any wear
- Inspect all fans, clean as needed, check rotation, check connections
- Inspect CMY module, manually move flags and check for signs of resistance, and if needed, clean guide rods first, then reapply a thin layer of grease (moly lube)
- Clean interior with low-volume compressed air, then clean optics prior to reassembly of head covers

Although the base has limited moving parts, the pan belt should also be inspected for wear. Remember to always perform an IP test anytime a cover is removed.

There is no specific time frame regarding the routine replacement of parts such as belts/stepper motors, PCBs, or LEDs. These items should only be replaced on an as needed bases, except for cooling fans, which should be replaced once the luminaries reach 10,000-hours. This is a prophylactic measure intended to keep the unit running as cool as possible, insuring proper function of all internal components. A complete service breakdown is available, please contact service@adj.com for any needed parts or manuals.

SAFETY GUIDELINES

For Your Own Personal Safety, Please Read and Understand This Manual Completely Before You Attempt To Install Or Operate This Unit!

- Be sure to save the packing carton in the unlikely event the device may have to be returned for service.
- Do not spill water or other liquids into or on to the charging device or flight case.
- Be sure that the local power outlet matches the required voltage for the device.
- Do not open up the device for any reason. There are no user serviceable parts inside.
- Disconnect the device's main power when left unused for long periods of time.
- Never connect this device to a dimmer pack.
- Do not attempt to operate this device if it has been damaged in any way.
- Never operate this device with the cover removed.
- To reduce the risk of electrical shock or fire, do not expose the charging device or the flight case to rain or moisture.
- Do not attempt to operate this device if the power cord has been frayed or broken.
- Do not attempt to remove or break off the ground prong from the electrical cord. This prong is used to reduce the risk of electrical shock and fire in case of an internal short.
- Disconnect from main power before making any type of connection.
- Never block the ventilation holes. Always be sure to mount this device in an area that will allow proper ventilation. Allow about 6" (15cm) between this device and a wall.
- This flight case and charging devices are intended for indoor use only. Use of these devices outdoors voids all warranties.
- Always mount this unit in a safe and stable manner.
- Please route your power cord out of the way of foot traffic. Power cords should be routed so they are not likely to be walked on, or pinched by items placed upon or against them

Operating temperature range for this fixture is 32 to 113 degrees F (0 to 45 degrees C). Do not operate this device when ambient temperature falls outside this range!

Maximum temperature of the external surface: 140°F (60°C).

Keep flammable materials away from this fixture!

FLIGHT CASE AND CHARGING DEVICES ARE DESIGNED FOR INDOOR USE ONLY! DO NOT EXPOSE TO RAIN OR MOISTURE!

The device should be serviced by qualified service personnel when:

- A. The power-supply cord or the plug has been damaged.
- B. Objects have fallen on, or liquid has been spilled into, the device.
- C. The flight case or charging devices have been exposed to rain or water.
- D. The appliance does not appear to operate normally or exhibits a marked change in performance.

SAFETY GUIDELINES

FLIGHT CASE LID

When opening the flight case, the lid must be locked in place manually. The lid support prop is located on the right-hand side of the flight case, near the power cable storage compartment. The lower end of the prop is fixed to the flight case, and the disconnected upper end contains a cut-out groove.

Once the lid has been opened, lift the upper end of the support bar and attach it to the recessed catch on the underside of the lid, along the right-hand side. Make sure that the catch is fully seated in the support bar's groove before reaching into the flight case.

FAILURE TO PROPERLY FOLLOW THIS PROCEDURE CAN RESULT IN PERSONAL INJURY OR DAMAGE TO THE DEVICE, AS THE LID MAY SWING SHUT WITHOUT WARNING!

OVERVIEW

FLIGHT CASE

***Note:** Charge indicator is red when charging, and green when complete. Charge indicator on the case displays charge status of the entire six-unit set. For individual charge status, please refer to the charge indicator on each individual unit.

OVERVIEW

LIGHTING FIXTURE

DMX ADDRESSING

All fixtures should be given a DMX starting address when operating with a DMX controller, in order to ensure that the correct fixture responds to the correct control signal. This digital starting address is the channel number from which the fixture starts to “listen” to the digital control signal sent out from the DMX controller. This starting DMX address is assigned by setting the correct DMX address on the digital control display on the fixture.

You can set the same starting address for all fixtures or a group of fixtures, or set different addresses for each individual fixture. Setting all fixtures to the same DMX address will cause all fixtures to react in the same way. In this case, please note that changing the settings of one channel will affect all the fixtures simultaneously.

If you set each fixture to a different DMX address, each unit will start to “listen” to the channel number you have set, based on the quantity of DMX channels of each fixture. That means changing the settings of one channel will only affect the selected fixture.

As an example, when operating this fixture model in 4 channel mode, you should set the starting DMX address of the first unit to 1, the second unit to 5 (4 + 1), the third unit to 9 (4 + 4 + 1), and so on. (See the chart below for more details.)

Mode canal	Unité 1 Adresse	Unité 2 Adresse	Unité 3 Adresse	Unité 4 Adresse
4-Ch	1	5	9	13
6-Ch	1	7	13	19
7-Ch	1	8	15	22
8-Ch	1	9	17	25
9-Ch	1	10	19	28
10-Ch	1	11	21	31
11-Ch	1	12	23	34
12-Ch	1	13	25	37
15-Ch	1	16	31	46
18-Ch	1	19	37	55

ARIA SETUP AND GUIDELINES

These devices do not feature physical DMX connector ports. Therefore, in order to utilize DMX control, the user must first set up the devices to run wireless DMX control. Follow the directions below to configure wireless DMX control:

1. First, select the DMX Channel Mode for that you would like the device to operate in. Press MODE until the the “DMX Settings” menu is displayed on the screen. Use the UP and DOWN buttons to scroll to “DMX Channel Mode,” then press the SETUP button.
2. Use UP and DOWN to scroll through the DMX Channel Mode options, then press SETUP to confirm your selection.
3. Next, enable the device’s ARIA capability. Press MODE until the “PERSONALITY” menu is displayed on the screen, then use UP and DOWN to scroll to “ARIA” and press SETUP.
4. Use UP and DOWN to scroll to “Enable Wireless,” then press SETUP to select this option.
5. Use UP and DOWN once again to toggle this setting to “Yes,” then confirm by pressing SETUP.
6. Next, select the Wireless channel. Press MODE until the “Personality” menu is displayed on the screen again, then use UP and DOWN to scroll to “Wireless Settings” and press SETUP.
7. Use UP and DOWN to scroll to “Set Wireless Channel,” then press SETUP again.
8. Now use UP and DOWN to scroll to your desired Wireless channel. Selectable values range from 00 to 15.
9. Finally, set the DMX address. Press the MODE button until the “DMX Settings” menu is displayed on the screen, then use UP and DOWN to scroll to “DMX Address,” then press SETUP.
10. Use the UP and DOWN buttons to scroll to your desired DMX address, then press SETUP to confirm your selection. Available values range from 001 to 512. Refer to the **DMX Addressing** section of this manual for detailed guidance. Repeat these steps for each individual unit that you wish to use.

ARIA SETUP AND GUIDELINES

There are many factors that can affect and/or interrupt a wireless signal, including walls, glass, metal, objects, and people. Therefore, the following guidelines are recommended in order to maximize the chances of having a clear path for the wireless signal to reach the device:

- For best results, install the device a minimum of 9.8 ft (3m) above audiences and/or ground level.
- Arrange the wireless antenna in an upright, vertical position.
- Position devices in direct line of sight of the transmitting controller.

Careful planning and testing of the selected installation location is critical to ensure optimum and reliable wireless operation.

**9.8 ft (3m)
Above Ground**

ARIA SETUP AND GUIDELINES

GENERAL INFORMATION

The Aria Bluetooth app has the ability to connect wirelessly to any device that has Aria wireless DMX installed and has Bluetooth enabled.

Before installing the fixture in a remote location, double check that the fixture's main power is switched on, and that the Bluetooth function has been enabled in the fixture's system menu. Certain fixtures may have Bluetooth disabled by default. If this function is disabled, then the fixture cannot be configured remotely using the Aria app, and will have to be configured directly from the fixture's control screen.

Additionally, the user should consider setting the fixture's No DMX setting to "Hold Last". This will allow the fixture to continue running using the current settings, even if the Aria app device moves out of range, the app is closed, or the signal is otherwise interrupted, minimizing disruption in the operation of the fixtures.

LEGACY DEVICES

Please note that legacy connected devices, such as those using Wifly, E-Fly, or Magfly, are not compatible with this app. For such legacy devices, the use of a bridge is recommended, as the bridge can communicate with these devices via its SM220 protocol.

The Aria X2 BLE app is currently available from the Apple app store.

FIXTURE IDENTIFICATION

Aria compatible devices can be identified and connected via the **Fixtures** tab in the app. This tab displays a field of twenty-four buttons that can be assigned to Aria compatible devices that are within range, and the buttons will automatically be assigned to devices in the order in which they are discovered. If more than twenty-four units are within range, it may be necessary to use the filter feature to search for the desired fixture. Button location can be edited by selecting the configuration key, then the user can drag and drop the buttons to the desired location and hit save to keep changes. Once a device is known to the app, it can also be assigned to a particular button. From that point forward, the assigned device will always be assigned to that button location.

IMPORTANT NOTE: For version 0.65 or higher, a shared system password is required to connect to any device.

Unlike wireless DMX, Bluetooth is a connect first protocol. To connect to a device or fixture, tap the assigned button in the **Fixtures** tab. If the connection is successful, a green frame will appear around the button, indicating that the app was able to retrieve the current channel values from the fixture. The app must be connected to a fixture in order to use its channel controls or view and change settings. Please note that not all Aria devices have channel controls.

Additionally, each fixture can only be connected to one device with the app at any given time. Once a fixture is connected to the app installed on one device, any other devices will be blocked from connecting. As a result, when setting up a new fixture for the first time, best practice is to have only a single user with the app open within range, in order to ensure that the fixture pairs to the intended user's device.

ARIA SETUP AND GUIDELINES

The second table section shows all Aria devices detected in range. A checkmark indicates the device is currently assigned to a button. If more than 24 devices are within range, the user may remove or add devices to the buttons list by tapping a row to check or uncheck a device. If all buttons are full, it will be necessary to uncheck a device before adding another.

Filter: The user can filter which Aria devices get button assignments by tapping “filter” at the top of the view. A popup will appear where the user can enter text to filter devices by username, model name, or manufacturer. **Please note that these searches are case sensitive.**

Note: If a device shows an asterisk (*) it means that there is no fixture profile currently available, and therefore there will be limited support available for that device. The user will still be able to connect and adjust channels if the device supports that feature, but the user will not be able to view how many channels the device has or the channel names.

SECURITY

Each fixture must have a password saved to be secure. When a new fixture is installed for the first time, its password will automatically be set to the app’s system password on first connection. Once the password has been entered, the user will need to exit out to the main page containing the fixture buttons, then de-select and re-select the fixture to lock in the password. From that point forward only, controlling devices that use the correct password can connect to this fixture. **This security is now required by law in most jurisdictions.**

The app will detect any Aria capable fixture within range, even if the app does not have the password to that fixture and therefore cannot access that fixture. If that fixture is selected in the app, the green frame will momentarily appear around that fixture’s button, but then disappear. This indicates that the fixture is visible but inaccessible.

UC IR REMOTE

The unit can only be controlled when it has been set to Primary mode. The unit will NOT respond to commands when it has been set to Secondary mode. When using the remote to control multiple units that are operating in primary/secondary mode, follow these steps to set up the units:

1. Power on the unit, and press MODE to scroll to the “Personality” menu.
2. Press SETUP, then use the UP and DOWN buttons to scroll to “Primary” or “Secondary” depending on the how you would like this unit to operate. Press SETUP to make your selection, and then use the UP and DOWN buttons to switch the option to ON.
3. Press SETUP to confirm and return to the “Personality” menu.
4. Use UP and DOWN to scroll to “Wireless Settings” and select “Set Wireless Channel.” Press SETUP and use UP and DOWN to set the unit to your desired Wireless channel. Repeat these steps for each unit. Please note that all units should be set to the same Wireless channel.

NOTES:

- Only one unit should be configured as the primary, while all the other units should be configured as secondaries.
- All units in the system should be set to the same wireless channel. If all units are set to the same wireless channel, and the units do not sync up and/or respond to commands, try using a different wireless channel.
- All units should be set to the same DMX channel mode.
- If fixtures fail to sync, verify that all settings mentioned above are the same, then power all devices off, then switch them on again to re-establish the link.

UC IR24 CONTROLS

- **On:** Fixture turns on and reverts to the last running state
- **Off:** Fixture goes into stand by mode in a blackout state.
- **Strobe:** Activates strobe mode. The strobe rate can be adjusted using the + / - buttons.
- **Sound:** This button has no defined function for this unit.
- **Color:** Activates color mode. Select a static color (0-15) using the number keys. The intensity for the set color can then be adjusted with the +/- buttons.
- **Program:** Activates program mode. Select an internal program (0-15) using the number keys. The selected program run speed can be adjusted with the +/- buttons. *Note: 13 of the 15 buttons will activate a program for this unit.*
- **+ and - buttons:** Adjusts strobe rate, mic sensitivity, intensity, or program run speed. The +/- buttons can be repeatedly pressed to increase or decrease by individual level increments, or pressed and held to quickly make large adjustments at once.
- **Number Keys (0-15):** These buttons are used to select preset static colors and internal programs. Colors stored in the number keys can be edited from the units menu if desired.

INSTALLATION

IP RATING

The Mirage Q IP is **IP65** rated. It is completely dust tight, and is protected against low-pressure directed jets of water from any direction. **Note that the charging base is NOT protected against moisture or dust intrusion of any kind, and should be used only in a dry, indoor setting!**

FLAMMABLE MATERIAL WARNING!

Keep device a minimum of 5.0 feet (1.5m) away from flammable material and/or pyrotechnics.

ELECTRICAL CONNECTIONS

A qualified electrician should be used for all electrical connections and/or installations.

DO NOT INSTALL THE DEVICE IF YOU ARE NOT QUALIFIED TO DO SO!

The unit **MUST** be installed following all local, national, and country commercial electrical and construction codes and regulations.

Before installing or mounting any device, a professional equipment installer **MUST** be consulted to determine whether the mounting structure or surface is properly certified to safely support the combined weight of the fixture, clamps, cables, and accessories.

Operating temperature range is **32 to 113 degrees F (0 to 45 degrees C)**. Do not operate the device if ambient temperatures fall outside of this range.

This fixture should be installed in areas outside walking paths, seating areas, and areas where unauthorized personnel might be able to reach the device by hand.

NEVER stand directly below the fixture when rigging, removing, or servicing.

Allow approximately 15 minutes for the fixture to cool down before servicing.

INSTALLATION

CLAMP INSTALLATION

The Mirage Q IP features a mounting clamp attachment point on the side of the device (see the illustration below). When mounting the fixture to a truss or any other suspended or overhead installation, be sure to secure appropriately rated clamps (not included) to the clamp attachment point.

RIGGING

Overhead rigging requires extensive experience, including but not limited to: calculating working load limits, understanding the installation material being used, and periodic safety inspection of all installation material and the fixture itself. If you lack these qualifications, do not attempt to perform the installation yourself. Improper installation can result in bodily injury.

CHARGING PORT CAP

In order to maintain IP65 integrity, the charge port of each device must be sealed off using the attached rubber cap when the charging port is not in use.

INSTALLATION

KICKSTAND FOR FLOOR PLACEMENT

The Mirage Q IP can also be placed on the floor to provide an uplighting display, and features a retractable kickstand that allows the device to be angled in the direction of the desired display. **Make sure that the rubber cap is secured over the charge port to maintain the device's IP65 rating.**

To deploy the kickstand, simply toggle the switch on the underside of the device, near the power charging port (1). The kickstand can then be deployed from the underside (2) at various notched increments, allowing a maximum angle of 35 degrees from the vertical axis (3).

Note: If set and activated, the alarm will be triggered by any movement of the device, including knocking over the device. The alarm will sound and the device will strobe red for the amount of time that was set in the “Alarm Time” setting, but will automatically stop when the device is returned to its place. Please be aware of this feature in the event that you decide to re-locate or re-position the device after the initial setup!

INSTALLATION

KENSINGTON KEY SLOT

The device features a slot for a Kensington-type security device that can be used to prevent theft. The key slot is located near the bottom of one of the device's feet, as shown in the illustration below. Be sure to attach the security device to a sturdy, fixed anchor point.

IN-CASE CHARGING

1. Lock the wheel casters by pressing down on the levers located near each caster.
2. Connect power cables to both the power in and power out ports, if desired. Please refer to the **Daisy Chain Power Linkage** section of this manual for details.
3. Remove the rubber cap from the charging port for each unit. **NOTE: It is recommended to fold the rubber cap back and over the closest CORNER of the device before placing it into its charging slot in the flight case. Refer to the top left image below.**
 - When placing the fixture in the case slot, the rubber cap should tuck neatly into the gap in the corner of the slot (see bottom image).
 - Do NOT fold the rubber caps back over the side edges of the unit, as the device will not fit in the flight case compartment this way. Refer to the top right image below.
 - Do NOT allow the rubber cap to get caught underneath the device, as this will interfere with the charging of the device.

4. Place an ADJ Mirage Q IP device in any of the device slots in the flight case. Up to 6 devices can be accommodated. The charge indicator located beside the power ports will illuminate to indicate that your device is charging. **It is strongly recommended to leave the case lid open during charging.**

SYSTEM MENU

This fixture includes an easy to navigate control panel display, from which all necessary settings and adjustments can be made. Press the **MODE** button to scroll through the main menu options, then press **SET UP** to select the currently displayed option. Then use the **UP** and **DOWN** buttons to scroll through the sub-menu options until reaching the desired setting. Press the **MODE** button at any time to return to the main menu without making any adjustments.

SYSTEM MENU - ENGLISH

MAIN MENU	OPTIONS / VALUES (Default Settings in BOLD)		VALUES/DESCRIPTION

CLEANING & MAINTENANCE

WARNING! DISCONNECT UNIT FROM POWER BEFORE PERFORMING ANY CLEANING OR MAINTENANCE PROCEDURES!

ALWAYS ALLOW THE FIXTURE TO COOL FOR AT LEAST 15 MINUTES BEFORE PERFORMING ANY CLEANING OR MAINTENANCE!

CLEANING

Frequent cleaning is recommended to ensure proper function, optimized light output, and an extended life. The frequency of cleaning depends on the environment in which the fixture operates: damp, smoky, or particularly dirty environments can cause greater accumulation of dirt on the fixture's optics. Clean periodically with a soft cloth to avoid dirt/debris accumulation.

NEVER use alcohol, solvents, or ammonia-based cleaners.

MAINTENANCE

Regular inspections are recommended to ensure proper function and extended life. There are no user serviceable parts inside this fixture. Please refer all other service issues to an authorized ADJ service technician. Should you need any spare parts, please order genuine parts from an authorized ADJ dealer.

Please refer to the following points during routine inspections:

- A detailed electrical check by an approved electrical engineer every three months, to make sure the circuit contacts are in good condition and prevent overheating.
- Be sure all screws and fasteners are securely tightened at all times. Loose screws may fall out during normal operation, resulting in damage or injury as larger parts could fall.
- Check for any deformations on the housing, color lenses, rigging hardware and rigging points (ceiling, suspension, trussing). Deformations in the housing could allow for dust to enter into the fixture. Damaged rigging points or unsecured rigging could cause the fixture to fall and seriously injure a person(s).
- Electric power supply cables must not show any damage, material fatigue, or sediments.

TORQUE SETTINGS

IN ORDER TO MAINTAIN THE IP65 RATING ON THE LIGHTING FIXTURES, ALL SCREWS MUST BE TIGHTENED TO THE FOLLOWING TORQUE SPECIFICATION USING A TORQUE DRIVER.

These screws must be torqued to *11.3 lb-in (13.0 kg-cm)*.

TORQUE DRIVERS (Recommended): UTICA TS-30 (shown)

ALTERNATE DRIVERS:

- Proto J6107A
- Wiha 28887

CAUTION! DO NOT OVER TORQUE SCREWS AS THIS CAN CAUSE LEAKAGE ISSUES! TO CONFIRM THE IP65 INTEGRITY AFTER A LAMP REPLACEMENT, TEST THE FIXTURE USING THE ELATION IP TESTER. CONTACT ELATION SERVICE FOR MORE DETAILS.

CAUTION! THE USE OF PROTECTIVE GLOVES AND SAFETY GOGGLES IS STRONGLY RECOMMENDED WHILE PERFORMING THE IP PRESSURE TEST! AVOID PLACING YOUR FACE, EYES, HANDS, ETC IN CLOSE PROXIMITY TO THE FIXTURE’S LENS WHILE PERFORMING THE TEST!

IP PRESSURE TESTING PARAMETERS		
Low Pressure Limit	High Pressure Limited	Steady/Hold Time
1.65 psi (11.4 KPa)	1.70 psi (11.7 KPa)	3 sec

BATTERY LIFE

Following any software update, the battery life information setting must be reset before it will display accurate information. This can be done by following the steps below:

1. Navigate to Battery > Operation Mode in the system menu and make sure that the device is set to either Standard 6 or Saver 10.
2. Navigate to Battery > Current Life in the system menu.
3. Press and hold the UP button until the device flashes amber once. The device should now display an accurate battery life reading.

FLIGHT CASE FUSE REPLACEMENT

The flight case features a replaceable fuse. To replace, disconnect the flight case from the power source, then use a screw driver to unscrew the fuse holder located beside the power ports. Remove the bad fuse and replace with a new one, then screw the fuse holder back in. Replace only with a new fuse of the same type and rating.

DIMENSIONAL DRAWINGS

MIRAGE Q IP

MIRAGE Q IP FLIGHT CASE

SPECIFICATIONS

MIRAGE Q6 PAK INCLUDES:

- (6) MIRAGE Q6 IP Black Fixtures
- (1) MIRAGE Q6 FC Flight Case
- (6) MIRAGE Q6 IPCB Charging bases and power supplies
- (1) UCIR24 Wireless Infrared Controller
- (1) IP65 Locking Power Cable

MIRAGE Q6 PAK FEATURES:

- Houses / Transports and Charges (6) MIRAGE Q6 IP™ BLACK fixtures

MIRAGE Q6 PAK DIMENSIONS / WEIGHT (loaded case with 6 fixtures):

- Length: 26.4" (671 mm)
- Width: 18.2" (461 mm)
- Vertical Height: 18.1" (459 mm)
- Loaded Weight: 97.9 lbs. (44.4 kg)

PAK ELECTRICAL / THERMAL:

- Power Input: AC100VAC~240VAC, 50/60Hz
- IP65 Power Locking Input and Output
- Max Power Consumption: 400 Watts
- Power Draw: 4A
- Charge status indicator
- 14°F to 113°F (-10°C to 45°C)

MIRAGE Q6 IP BLACK FIXTURE

FIXTURE SOURCE:

- 4 x 10-Watt RGBA LEDs (4-in-1 - Red, Green, Blue & Amber)
- 50,000 Hour Average Life*

*May vary depending on several factors including but not limited to: Environmental Conditions, Power/Voltage, Usage Patterns (On-Off Cycling), Control, and Dimming.

PHOTOMETRIC DATA:

- LUX: 9903 @ 2M; 2303 @ 4M

FIXTURE OPTICS:

- 11-degree beam angle

FIXTURE CONTROL / CONNECTIONS:

- Control protocol: Aria X2 Wireless Management System
- 11 DMX Channel modes: 4, 6, 7, 8, 9A, 9B, 10, 11, 12, 15 or 18 channels
- Remote control: Aria X2 BLE App and UCIR24 (Included)
- 5 Operation modes: RGBA Dimmer Mode; Auto Run Mode (13 programs, & 1 color/fade combo mode); Static Color mode; and Aria X2 Wireless Management System
- With Wired Digital Communication Network
- Contact Charging system. 6x Charging bases and power supplies included in flight case

FIXTURE FEATURES:

- IP65 Outdoor Rated
- Built-in kickstand to angle fixture when sitting on the floor
- 4-touch button OLED display on rear panel
- Built-in wireless DMX: Up to 2,500 feet (760M)
- Aria X2 BLE App (Compatible with iPhone and iPad)
- Battery Transceiver
- 64 built-in Color Macros
- Variable RGBA color mixing offers a smooth, seemingly unlimited color palette - Great for Wall Washing!
- LED pulse and strobe effect (0.2Hz-11Hz)
- Flicker Free Operation
- Electronic Dimming: 0 - 100% with 6 dim modes and 4 dim curves
- Run all night – No duty cycle
- Energy Save Mode
- Built-in alarm system with On/Off
- Battery charge indicator on each fixture
- Die-cast aluminum housing

FIXTURE BATTERY:

- Battery Type: Fixed lithium battery
- Battery Energy: 162.8WH (Watt Hours)
- Battery Weight: 0.84 kg.
- Battery Voltage: 14.8V
- Battery Capacity: 11000mAh (Typical Capacity)
- Total Lithium Ion Cells: 20 pieces
- Battery Wrap Material: PVC sleeving + highland barley paper
- Battery Charge Time: 7 Hours
- Battery Life: 14 hours (When color changing in Battery Saver Mode 14); 40 hours (When set to a single color in Battery Saver Mode 14) Battery Saver Mode 14 is available in software V1.03>

FIXTURE DIMENSIONS / WEIGHT (SINGLE UNIT):

- Length: 5.6" (143.2 mm)
- Width: 5.6" (143.2 mm)
- Vertical Height: 8.3" (211 mm)
- Weight: 8.84 lbs. (4.01 kg.)

FIXTURE ELECTRICAL / THERMAL:

- Power Input: DC 17.3V
- Amperage Draw: 2A
- 40W Max Power Consumption (each unit)
- Ambient Operating Temperature: 14°F to 113°F (-10°C to 45°C)
- Maximum temperature of the external surface: 140°F (60°C)

INSTALLATION:

- Rigging: Clamps (Not Included) / Floor
- Working Position: Any (360°)

APPROVALS / RATINGS:

- CE, cETLus, IP65

FCC STATEMENT

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC RADIO FREQUENCY INTERFERENCE WARNINGS & INSTRUCTIONS

This product has been tested and found to comply with the limits as per Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device uses and can radiate radio frequency energy and, if not installed and used in accordance with the included instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this device does cause harmful interference to radio or television reception, which can be determined by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following methods:

- Reorient or relocate the device.
- Increase the separation between the device and the receiver.
- Connect the device and the radio receiver to electrical outlets on different circuits.
- Consult the dealer or an experienced radio/TV technician for help.

Energy Saving Matters (EuP 2009/125/EC)

Saving electric energy is a key to help protecting the environment. Please turn off all electrical products when they are not in use. To avoid power consumption in idle mode, disconnect all electrical equipment from power when not in use. Thank you!
