1. INTRODUCTION

The HDMI over single CAT5e/6/7 Transmitter and Receiver set is a great solution to extend uncompressed audio/video and IP data over a single run of CAT5e/6/7 cable at a distance up to 60 metres . Multi-control interfaces are available which includes IR, RS-232 and USB connection. This new extender set complies with advanced protocols of HDCP2.2 and HDMI 2.0, the HDCP1.4 also supported. The 6G HDMI video is able to be processed. Except extend 4K2K data, it features useful audio functions. The “optical audio return” supports audio transmit back from Receiver to Transmitter. Besides, the “audio insertion” allows external audio insert to HDMI video such as background music insertion. The HDBT clock stretch and TMDS re-clocking are considered. The Receiver (PD) can be powered by the PoE 48V function of the Transmitter (PSE), allowing for greater flexibility to fit different installation scenarios.
